19.10.2022 JV&KRL

In this exercise we play with the basic features of C++ language.

Hint: Visual Studio reformats the selected source code by ctrl-k ctrl-f command. This can be useful when importing code from different sources.

Exercise 1 (Basic input and output, arrays and strings 4p)

Write a program that defines an array of 10 C++ strings. The program asks user to enter ten strings. Each question must state the number of the string that user should enter, for example: "Enter string 1:". After user has entered all strings the program prints the strings, one string per line, and total number characters in the strings.
